How Rain Is Made

Rain begins as water in lakes, rivers, and the sea. The sun warms the water. Some of it rises into the air as a gas you cannot see. High in the sky, the air is cold. The gas turns back into tiny drops of water. The drops make clouds. When the drops get big, they fall as rain. Big drops are too heavy to stay in the sky. The rain fills the lakes and rivers again.

1. Which question does this text answer?

   How cold is snow? How is rain made? Why is the sky blue?

2. What warms the water? Use the text.

   The clouds The moon The wind The sun

3. Which sentence is NOT true, by this text?

   The rain fills the lakes and rivers again.

   The sun warms the water.

   The drops make clouds.

   The sun freezes the water.

4. What do the tiny drops of water make? Use the text.

   Snow Lakes Wind Clouds

5. In this text, what does "rises" mean?

   falls down goes up stays still

6. What does this text help you learn about?

   why thunder is loud how clouds form how rain is made

   what the sun does to water

7. What happens when the drops get big? Use the text.

   They float up to the sun. They fall as rain. They turn into a gas.

   They freeze in the lake.

8. Which fact is in this text?

Rain begins in the clouds only.

The drops make clouds.

Clouds are made of smoke.

The sun freezes the water.

9. Which title tells what you learn from this text?

The Sun Warms Water How Rain Is Made All About Weather

10. Which question can you NOT answer with this text?

How is rain made?

What warms the water?

Why is the sky blue?

What do the tiny drops of water make?
