Two Texts About the Moon

Text 1: The moon is the closest neighbor to Earth in space. It is a big ball of gray rock. The moon has no air and no water. It does not make its own light. It shines because light from the sun bounces off it. It takes about a month for the moon to travel once around Earth. As it travels, it seems to change shape. Sometimes it looks round and full. Other times it looks like a thin curve. These shapes are called phases.

Text 2: People have walked on the moon. In 1969, two astronauts landed there in a small spacecraft. They wore space suits with air tanks because there is no air on the moon. The astronauts hopped across the dusty ground. They collected moon rocks to bring home. Later, ten more astronauts walked on the moon too. Their boot prints are still on the moon today. There is no wind there to blow the prints away.

1. Which text would help you answer "How many people have walked on the moon?"
   - Text 2, because it tells about the astronauts
   - Text 1, because it says the moon has no water
   - Text 1, because it tells about the phases

2. In Text 1, what are phases?
   - the suits astronauts wear
   - the shapes the moon seems to have
   - the rocks astronauts brought home

3. Why are the boot prints still on the moon, according to Text 2?
   - There is no wind to blow them away.
   - The prints were pressed into hard rock.
   - Rain made the prints turn hard.

4. What important point about air do both texts make?
   The moon has strong winds. The moon has no air. The moon is full of water.
