Stamped and Sent

The post office helps letters and packages travel to homes everywhere. Before a letter can go, it needs two things. It needs an address that tells where it is going. It also needs a stamp, which pays for the trip. Then it can be dropped into a mailbox.

Next, the mail goes to a large building to be sorted. Machines there read each address very quickly. They put the letters into groups by their zip codes. Workers help sort packages that are too big for the machines.

After that, the mail starts its trip. Trucks carry it from one city to the next. Letters going far away often ride on airplanes. A letter can cross the whole country in just a few days.

Last, a mail carrier brings the mail to each home. Every carrier follows a route, the same path of streets each day. Some carriers walk, and others drive small trucks. They deliver mail in rain, snow, and heat.

1. What is paragraph 4 mostly about?
   - how mail reaches each home
   - how machines read addresses
   - how stamps pay for mail

2. Which detail belongs in paragraph 3?
   - Big trucks may drive all night to bring mail to the next city.
   - Some carriers put mail through a slot in the door.
   - Sorting machines can read handwriting, too.

3. Which sentence tells the main topic?
   - The post office helps letters and packages travel to homes everywhere.
   - Machines there read each address very quickly.
   - Some carriers walk, and others drive small trucks.

4. Which detail supports the idea that mail can travel far very quickly?
   - Workers help sort packages that are too big for the machines.
   - A letter can cross the whole country in just a few days.
   - It also needs a stamp, which pays for the trip.
