Pollination and Seed Dispersal

Grade 2 Science Worksheet - Challenge Me

Name _____ Date _____

Circle the answer.

1. A burr sticks to a dog's fur and drops far away. Which process is this?
   - pollination by a bee in the garden
   - seed dispersal by an animal
   - pollination by a bird

2. Zoe drops a flat paper seed and a crumpled paper ball. A fan blows. What will happen?
   - The flat seed will travel farther.
   - Neither will move.
   - Both will land in the same spot.

3. Many bees die one spring. What will most likely happen to the apple trees?
   - Fewer flowers get pollen, so there are fewer apples.
   - The trees stop needing any sunlight at all.
   - The trees make many more apples than they did before.

4. A seed has tiny hooks. How will it most likely travel?
   - stuck to an animal's fur
   - dropped by a bee on a flower
   - carried by the rain

READ THIS FIRST

Apple orchard

Bees visited the apple tree flowers in spring. By fall, the tree had apples with seeds. A tree that no bees visited had very few apples.

5. Which claim does the story support?
   - Bees spread apple seeds all across the field and farm.
   - Bee visits help apple trees make apples with seeds.
   - Bees make apples without any flowers at all.
