Pollination and Seed Dispersal

Grade 2 Science Worksheet - Challenge Me

Name _____ Date _____

Circle the answer.

1. A bee carries pollen from one flower to another. Which process is this?

   seed dispersal by an animal

   pollination by wind

   pollination by a bee

2. Zoe drops a cotton-fluff seed and a bare bead. What will happen?

   The fluffy seed will drift farther.

   Both will land in the same spot.

   The bare bead will drift much farther.

3. A garden has no butterflies or moths. What will most likely happen to some flowers?

   Fewer of them get pollen, so they make fewer seeds.

   They make many more seeds than before.

   They make seeds even without any pollen at all.

4. A seed has a fluffy top. How will it most likely travel?

   buried by a squirrel floating on the wind stuck to an animal's fur

READ THIS FIRST

Garden observation

A bee visited two flowers. Yellow pollen stuck to its body at the first flower and rubbed onto the second flower. Later, a burr with seeds hooked onto a dog's fur and traveled away from the plant.

5. How are the bee and the dog alike in this story?

   Each one helped a plant by moving something.

   Each one moved pollen from flower to flower.

   Each one planted a seed in the ground.
