Pollination and Seed Dispersal

Grade 2 Science Worksheet

Name _____ Date _____

Circle the answer.

1. A bird eats red berries and drops the seeds on the other side of the field. What is this helping the plant do?

   spread its seeds to a new place

   start growing from a tiny little seed

   grow many more flowers this year

2. Why do many flowers have bright petals and sweet nectar?

   to bring animals that carry pollen

   to keep all of the animals away

   to catch the rain that falls on it

3. Which seed will stick to an animal's fur best?

   a seed inside a hard shell a heavy smooth seed a seed with tiny hooks

4. A new oak tree grows far from the old oak. A squirrel lived nearby. What best explains this?

   The squirrel buried an acorn there.

   The old oak walked there by itself.

   A bee brought pollen to that spot.

READ THIS FIRST

Garden observation

A bee visited two flowers. Yellow pollen stuck to its body at the first flower and rubbed onto the second flower. Later, a burr with seeds hooked onto a dog's fur and traveled away from the plant.

5. Which observation shows pollination?

   The dog traveled away from the plant.

   Pollen rubbed onto the second flower.

   A burr hooked onto the dog's fur.
