Hummingbirds: Tiny Fliers

Hummingbirds are the smallest birds in North America. Some weigh less than a nickel. Even so, they are some of the most agile fliers in the world. They can dart left, zoom right, and even fly backward without bumping into anything.

A hummingbird can also hover. That means it stays in one place in the air, like a helicopter. Its wings beat up to 80 times every second. They move so rapidly that they look like a blur. The fast wings make a humming sound, which is how the bird got its name.

Hummingbirds need a lot of energy. They sip nectar, a sweet liquid found inside flowers. A hummingbird visits hundreds of flowers each day. Its long, thin beak reaches deep inside each blossom.

Many hummingbirds are territorial. A male will guard his patch of flowers. He chases away other birds that come too close. He may even chase away bees!

In the fall, many hummingbirds migrate. They travel south to warmer places, such as Mexico and Central America. Some fly across the Gulf of Mexico without stopping. In the spring, they make the long trip back north.

You can help hummingbirds by planting bright flowers. Red and orange flowers shaped like tubes are their favorites. Then watch closely. These tiny birds are speedy, so you may only catch a glimpse!

1. Hummingbirds are agile fliers. What does agile mean?
   - able to move quickly and easily
   - very small and light
   - loud and noisy

2. What does hover mean?
   - fly very far away
   - stay in one place in the air
   - land on a flower

3. What does territorial mean in this text?
   - friendly with other birds
   - guarding an area and keeping others out
   - able to fly backward

4. What does migrate mean?
   - sleep through the winter
   - travel to another place as seasons change
   - build a nest in a tree
