Mealtime in Space

Astronauts on the International Space Station eat three meals a day, just like you. But eating in space is quite different from eating at home.

On the space station, everything floats. Crumbs could drift into the astronauts' eyes or clog the machines. That is why astronauts eat tortillas instead of sliced bread. Tortillas make far fewer crumbs. Salt and pepper also come in liquid form, because loose grains would float away.

Most space food is prepared on Earth before the trip. Some meals are dried, so the astronauts add water before eating. Others come in sealed pouches that can be warmed in a small oven. Drinks come as powder in bags. Astronauts squirt in water and sip through a straw.

Astronauts must also keep their food from floating off. Many packages have strips that stick to a tray. Sticky foods, such as peanut butter and thick sauces, cling to a spoon.

Fresh food is a special treat. When a supply ship arrives, it sometimes brings apples, oranges, or other fruit. Astronauts have also grown lettuce in a small space garden.

Taste can change in space, too. Fluids in the body shift toward the head, so astronauts often feel stuffed up, like they have a cold. Because of this, many crew members enjoy spicy foods and hot sauce.

1. Astronauts have grown lettuce in a space garden.
   Tortillas make far fewer crumbs than sliced bread.
   Some meals are dried, so astronauts add water first.

2. Many packages have strips that stick to a tray.
   Everything floats on the space station.
   Peanut butter clings to a spoon.

3. Supply ships sometimes bring apples and oranges.
   Most space food is prepared on Earth before the trip.
   Tortillas make far fewer crumbs than sliced bread.

4. Most space food is prepared on Earth before the trip.
   Astronauts sip drinks through a straw.
   Foods are chosen so there are few crumbs.
